8. IN CASE OF APPLICATION CLAIMING PRIORITY OF APPLICATION FILED IN CONVENTION COUNTRY, PARTICULARS OF CONVENTION APPLICATION					
Country	Application Number	Filing date	Name of the applicant	Title of the invention	IPC (as classified in the convention country)
9. IN CASE OF PCT NATIONAL PHASE APPLICATION, PARTICULARS OF INTERNATIONAL APPLICATION FILED UNDER PATENT CO-OPERATION TREATY (PCT)					
International application number			International filing date		
10. IN CASE OF DIVISIONAL APPLICATION FILED UNDER SECTION 16, PARTICULARS OF ORIGINAL (FIRST) APPLICATION					
Original (first) application No.			Date of filing of original (first) application		
11. IN CASE OF PATENT OF ADDITION FILED UNDER SECTION 54, PARTICULARS OF MAIN APPLICATION OR PATENT					
Main application/patent No.			Date of filing of main application		
12. DECLARATIONS					
(i) Declaration by the inventor(s) (In case the applicant is an assignee: the inventor(s) may sign here in below or the applicant may upload the assignment or enclose the assignment with this application for patent or send the assignment by post/electronic transmission duly authenticated within the prescribed period). I/We, the above named inventor(s) is/are the true & first inventor(s) for this Invention and declare that the applicant(s) here in is/are my/our assignee or legal representative. (a) Date: (b) Signature(s): (c) Name(s): Mrs. Shakthipriya P Mr. Malleeshwar V Ms. Priyadarshini S Ms. Priyadarshini S Ms. Kanika S Ms. Moucihasri T N					

(ii) Declaration by the applicant(s) in the convention country

(In case the applicant in India is different than the applicant in the convention country: the applicant in the convention country may sign here in below or applicant in India may upload the assignment from the applicant in the convention country or enclose the said assignment with this application for patent or send the assignment by post/electronic transmission duly authenticated within the prescribed period)

I/We, the applicant(s) in the convention country declare that the applicant(s) herein is/are my/our assignee or legal representative.

Date:

Signature(s):

Name(s) of the signatory:

Mrs.Shakthipriya P

Ms.Kanika S

Mr.Malleeshwar V

Ms. Priyadharshini S

Ms.Mouciasri T N

(iii) Declaration by the applicant(s)

I/We the applicant(s) hereby declare(s) that: -

- ☐ I am/ We are in possession of the above-mentioned invention.
- ☐ The provisional/complete specification relating to the invention is filed with this application.
- ☐ The invention as disclosed in the specification uses the biological material from India and the necessary permission from the competent authority shall be submitted by me/us before the grant of patent to me/us.
- ☐ There is no lawful ground of objection(s) to the grant of the Patent to me/us.
- ☐ I am/we are the true & first inventor(s).
- ☐ I am/we are the assignee or legal representative of true & first inventor(s).
- ☐ The application or each of the applications, particulars of which are given in Paragraph-8, was the first application in convention country/countries in respect of my/our invention(s).
- ☐ I/We claim the priority from the above mentioned application(s) filed in convention country/countries and state that no application for protection in respect of the invention had been made in a convention country before that date by me/us or by any person from which I/We derive the title.
- ☐ My/our application in India is based on international application under Patent Cooperation Treaty (PCT) as mentioned in Paragraph-9.
- ☐ The application is divided out of my /our application particulars of which is given in Paragraph-10 and pray that this application May be treated as deemed to have been filed on DD/MM/YYYY under section 16 of the Act.
- ☐ The said invention is an improvement in or modification of the invention particulars of which are given in Paragraph-11

13. FOLLOWING ARE THE ATTACHMENTS WITH THE APPLICATION

a. Form 2

Item	Details	Fee	Remarks
Complete/provisional specification#	No. of pages:		
No. of Claim(s)	No. of claims: and No. of pages:		
Abstract	No. of pages:		

No. of Drawing(s)	No. of drawings: and No. of pages:		
Total			

In case of a complete specification, if the applicant desires to adopt the drawings filed with his provisional specification as the drawings or part of the drawings for the complete specification under rule 13(4), the number of such pages filed with the provisional specification are required to be mentioned here.

- Complete specification (in conformation with the international application)/as amended before the International Preliminary Examination Authority (IPEA), as applicable (2 copies).
- Sequence listing in electronic form
- Drawings (in conformation with the international application)/as amended before the International Preliminary Examination Authority (IPEA), as applicable (2 copies).
- Priority document(s) or a request to retrieve the priority document(s) from DAS (Digital Access Service) if the applicant had already requested the office of first filing to make the priority document(s) available to DAS.
- Translation of priority document/Specification/International Search Report/International Preliminary Report on Patentability.
- Statement and Undertaking on Form 3
- Declaration of Inventorship on Form 5
- Power of Authority
-

Total fee Rs in Cash / Banker's Cheque / Bank Draft bearing No
..... Date on
.....Bank.

I/We hereby declare that to the best of my/our knowledge, information and belief the fact and matters slated here in are correct and I/We request that a patent may be granted to me/us for the said invention.

**DEPARTMENT OF ARTIFICIAL INTELLIGENCE AND DATA
SCIENCE,SRI SHAKTHI INSTITUTE OF ENGINEERING AND
TECHNOLOGY,COIMBATORE.**

ABSTRACT

The present invention concerns an autonomously functioning artificial intelligence-based system called AI-powered Medical Diagnosis System, which helps in early disease detection and medical decision-making using intelligent data analysis. At the present moment, medical diagnostics require expert consultations, manual analyses of the report and time, which can lead to delays in the treatment process and decreased access to health care services for patients from distant regions. This system will provide intelligent solutions to aforementioned problems through creating a convenient website that can analyze medical data, patient symptoms, and uploaded scan reports. Users can log in, submit their medical scans or symptoms, and get results provided through artificial intelligence. The front end of the application is created in React.js along with the use of React Router for switching between different modules: login, dashboard, and upload scan module. The back-end uses Node.js and Express.js that will take requests, process data, and communicate with other system parts. After medical data upload, the system analyzes the entered data and provides information on possible diseases and abnormalities detected. Additionally, the system also offers a doctor's dashboard that enables medical practitioners to see patient data, diagnosis outcomes, and images efficiently. The system ensures that all medical data is handled safely via environment-based configuration and authentication processes. In summary, the AI-Powered Medical Diagnosis System has made it easier for people to access healthcare facilities, shortened diagnosis times, and make decisions easily.

FIELD OF THE INVENTION

This invention belongs to the sphere of healthcare analytics and artificial intelligence, especially automated medical data processing, visualization of intelligent diagnostics, and interaction with patient health data by using natural languages. This invention combines various concepts related to machine learning, healthcare data analysis, and web applications in order to create an effective tool for processing medical information. The invention more precisely relates to those systems, which allow users to diagnose illnesses automatically and generate health insights while working with patients' symptoms without the need for in-depth medical expertise. It also includes the process of applying artificial intelligence technologies to interpret patients' symptoms and convert them into practical diagnosis results. Moreover, this invention relates to the ability of artificial intelligence to assist in generating reports and help healthcare professionals to understand and apply diagnostic techniques automatically. Thus, this system can be applied in such areas as hospitals, clinics, telemedicine, and any healthcare research organizations where medical interpretation is necessary.

BACKGROUND OF THE INVENTION

Currently, there is an increasing demand for the ability to rapidly and accurately identify diseases in various parts of the world. The patient's reliance on manual consultations can cause delays in diagnosing diseases, particularly in regions with a shortage of healthcare specialists. The traditional methods of identifying diseases consist of many stages such as collecting symptoms of the condition, reviewing reports, and evaluating them clinically, which takes much time. Digital healthcare technologies have already managed to solve some issues related to patient registration, but they fail to include the ability to analyze data from patients and medical scans intelligently. Most of the existing services need manual analysis of results by doctors, which reduces productivity and increases load. Hence, healthcare workers have to spend time collecting information about patients' history and interpreting reports. Moreover, patients usually face many obstacles regarding their access to efficient healthcare services since existing platforms are hard to use for people unfamiliar with medicine. It can become extremely challenging for individuals to understand medical reports without the help of specialists. In addition to that, the currently available systems fail to offer an integrated solution that offers the entire process of logging in, uploading scans, intelligently diagnosing, and displaying results in one place. As a result, there is a lack of efficiency due to the lack of integrated solutions. As a consequence, there is a need to develop a diagnosis medical system using artificial intelligence. The system will be used to analyze patients' symptoms and medical data as well as give timely diagnostic suggestions.

SUMMARY OF THE INVENTION

This invention presents the AI-Powered Medical Diagnosis System, which is intended to enhance disease detection capabilities and make better decisions in the field of healthcare. Users have access to secure login functions, where they enter their symptoms and attach medical images or reports that will undergo automatic analysis. With the help of artificial intelligence technologies, the system analyzes patients' information to determine possible diseases and make meaningful suggestions regarding their diagnosis. Moreover, users are provided with a comfortable dashboard, where they can see the results of the diagnosis and manage their medical information. Besides, the invention guarantees secure management of patients' information and system reliability. Overall, through the integration of artificial intelligence, automation, and web technologies, the proposed system increases accessibility in healthcare, speeds up the diagnosis process, and makes healthcare professionals' work more effective.

DETAILED DESCRIPTION OF THE INVENTION

This invention involves the use of an AI-based system that automates the process of diagnosis. This is accomplished through an automated process of carrying out various tasks. In the first place, the user accesses the website where they securely log in. Once the user is authenticated, they may proceed to enter their symptoms and medical scans/ reports that they have. The system validates the information provided and processes it to ensure reliable information input. After validation of the data input, the system will conduct intelligent analysis by looking at the symptoms, recognizing patterns, and analyzing health risks. The results of processing the data will be sent to the diagnostic module to analyze it and predict possible diagnoses. Apart from carrying out analysis on user data, the system offers a friendly user interface that ensures smooth navigation in the login, dashboard, and uploading modules of the system. Moreover, the system ensures privacy and security of patients' information by storing their data. The system generates a summary of the diagnostic analysis for better decision making. Moreover, the system offers diagnostic analysis and suggestions to help healthcare practitioners make decisions. Lastly, the system presents all outputs in a well-structured manner that helps users manage their health information. The process ensures that there is complete automation from data collection to the final results without much effort.

COMPOSITION AND FUNCTIONALITY OF THE COMPONENTS

1. User Login Component

It is an important component that helps users log into the system with their authentication details. It verifies their identity and facilitates a secure access mechanism to the system. This module avoids any kind of unapproved access to the system that might lead to leakage of any vital patient information, thus improving reliability of the system. This component is the starting point of the system ensuring that no user except the authorized ones can have access to diagnosis features.

2. Symptom Input and Medical Report Upload Component

It enables users to input patient symptoms or upload relevant scan documents for further diagnosis. It makes sure of the validation of uploaded files. It facilitates the process of data entry by allowing only correct medical data to be submitted to the analysis component of the system.

3. Artificial Intelligence Analysis Engine

It forms the heart of the system which helps in analysis of patients' symptoms and medical records by applying algorithms. It makes use of machine learning algorithms to detect diseases and come up with predictive insights.

4. Dashboard and Visualization Module

The module will display diagnosis results in an organized and easily readable format. It will provide a user-friendly dashboard on which patients, doctors, and other relevant parties will be able to access diagnosis results and other medical information.

5. Data Management and Storage Module

It will store patient information, scanned images, and results of diagnoses securely. The information is stored confidentially and efficiently in order for any medical record to be accessible for future references.

6. Report Generation Module

The report generation module will organize results from diagnostic analysis in report format for easy viewing and management. It will allow patients and doctors to access medical insights from the analysis results.

DIAGRAM

AI - POWERED MEDICAL DIAGNOSIS SYSTEM

ABSTRACT

Healthcare diagnostic systems have been developing quickly due to the emergence of intelligent medical technologies powered by artificial intelligence. Today's healthcare landscape features patients that produce vast amounts of medical data including symptoms, reports, and diagnostic images; however, interpretation of such data often requires medical knowledge and a lot of time. Traditional healthcare diagnosis methods involve manual diagnostics and consultations with doctors and are associated with significant risks of delay and unavailability, especially in remote locations. Thus, an intelligent diagnostic tool is required to assist in medical diagnosis automation and decision making. An AI-Powered Medical Diagnosis System is offered in order to perform automated diagnostics by using a web interface where users can input symptoms and diagnose themselves using uploaded medical images. An integrated set of features include symptom analysis, AI-powered medical diagnosis, results visualization in the form of a dashboard and generation of a comprehensive report. Diagnostic precision, interactive result visualization and AI-generated insights will be guaranteed by implementing the suggested solution.

CLAIMS

1. An artificial intelligence-based system used in the diagnosis of the medical state of the patients which includes user verification, symptoms recording, medical scans uploading, intelligent analysis, visualization, and reports generating modules.
2. Medical data processing module for analyzing the symptoms of the patient, checking the correctness of the medical report, and preprocessing of the medical scan file for getting reliable diagnosis results.
3. Artificial intelligence diagnosis module that recognizes possible illnesses, health risks, and other important information about the patient through his symptoms and medical data.
4. Visualizer module which displays the results of the diagnosis, as well as some other useful information, in an organized manner.
5. Intelligent recommendation module that enables users to get AI-based recommendations about their health conditions.
6. Report generation module used to generate and save report of analyzed data for further use.
